

Solution Architecture

Date	25 September 2026
Team ID	6ab22122e880316a482c60dc
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Architecture Layer	Component Name	Function in the Solution
1. Data Source Layer	Excel Spreadsheet (.xlsx)	The o line source containing bulk raw employee data (ID, Name, Email, Dept, Location).
2. Ingestion Layer	ServiceNow Load Data Module	Uploads the file and automatically creates the temporary Import Set Staging Table (u_employee_import).
3. Processing Layer	Transform Map Engine	Maps spreadsheet columns to database fields. Executes the "Coalesce" logic to check if an Employee ID already exists.
4. Storage Layer	Custom Target Table	The final ServiceNow relational database table (u_employee_test) where Inserted and Updated records are securely stored.
5. Presentation Layer	Reporting & PA Dashboards	Queries the Target Table to render real-time UI components (Pie Charts, Bar Charts, List views) for the end user.
