

Project Development Phase

Model Performance Test

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

Screenshot Insertion Notes

Insert the Employee Test table list view screenshot in the Data Rendered section.

Insert the central multi-widget dashboard screenshot in the Dashboard Design section.

Insert the Department Pie Chart report screenshot in the Report Design section.

Illustrative Department Pie Chart report

Field	Details
Date	25 September 2026
Team ID	6ab22122e880316a482c60dc
Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	4 Marks

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Values: • Source File: Sample Spreadsheet.xlsx • Initial Staging Records: 15 rows processed • Staging Table: u_employee_import • Production Target Table: u_employee_test • Final Rendered Rows: 15 active employee records loaded across Hyderabad and regional branches with fields: Employee ID, Name, Email, Department, and Location. Screenshot placeholder: Insert the Employee Test table list view screenshot here.
2.	Data Preprocessing	Values: • Preprocessing Engine: ServiceNow System Import Sets & Transform Engine. • Staging Schema Validation: Column structures mapped from staging table to target table schema using Auto Map Matching Fields. • Deduplication & Cleansing: Coalesce logic applied on Employee ID (Coalesce = true). • Execution Outcome: Validated data inserts and updates without duplicate primary records; empty or matching records handled smoothly (0 errors, 4 ignored on re-import).
3.	Utilization of Data Filters	Values: • Table Level Filters: Dynamic condition filtering applied on Department (Department = ServiceNow vs Department = Salesforce) and Location (Location = Hyderabad). • Column Personalization: Personalize List Columns configuration applied to show Employee ID, Name, Email, Department, and Location while filtering out system-generated metadata fields. • Dashboard Interactive Filters: Interactive breakdown filters enabled for Department and Location to filter report widgets simultaneously.
4.	DAX Queries Used / Data Transformation Logic	Values (ServiceNow Transformation & Aggregation Logic): • Coalesce Logic: source.u_employee_id == target.u_employee_id -> UPDATE else INSERT • Department Headcount Aggregation: Count(u_employee_test.sys_id) GROUP BY u_employee_test.u_department • Location Headcount Aggregation: Count(u_employee_test.sys_id) GROUP BY u_employee_test.u_location • Import Validation Metric: Total Processed = Inserts (15) + Updates (0) + Errors (0)
5.	Dashboard design	No of Visualizations / Graphs: 3 Widgets Values: • Dashboard Name: Employee Overview / Performance Analytics Dashboard • Widget 1: Employee Distribution by Department (Pie Chart) • Widget 2: Department-wise Count Distribution (Bar Chart) • Widget 3: Live Employee Test Data Grid (Interactive List View) Screenshot placeholder: Insert the central multi-widget dashboard screenshot here.
6.	Report Design	No of Visualizations / Graphs: 2 Reports Values: • Report 1: 'Employees by Department' - Pie Chart report grouped by Department field with aggregation set to Count. • Report 2: 'Employees by Location' - Vertical Bar Chart report displaying distribution across operational locations. Screenshot placeholder: Insert the Department Pie Chart report screenshot here.
