Project Name	Import Data using Transform Maps (Spreadsheet) in ServiceNow
Maximum Marks	4 Marks

Project Overview

Project Name: Import Data using Transform Maps (Spreadsheet) in ServiceNow

Project Description: This project validates the end-to-end data ingestion workflow within ServiceNow. Employee records from an external spreadsheet (Sample Spreadsheet.xlsx) are staged into a custom Import Set Table (u_employee_import) and mapped to a custom Target Table (u_employee_test) using a Transform Map. It tests schema definition, automated field mapping, coalesce logic for deduplication, execution history monitoring, and visual reporting via dashboards.

Project Version: 1.0.0

Testing Period: 25 September 2026 to 26 September 2026

Testing Scope

- Custom Target Table creation with schema fields (Employee ID, Name, Email, Department, Location).
- Spreadsheet file data ingestion using the ServiceNow Load Data module.
- Transform Map configuration and Auto Map Matching Fields functionality.
- Record deduplication and data integrity evaluation via the Coalesce field rule.
- Transform execution verification, state reporting, and transform history inspection.
- Visual analytics generation (Department Pie Chart) and executive dashboard assembly.

Testing Environment

URL/Location: ServiceNow Developer Instance (<https://dev-instance.service-now.com>)

Credentials (if required): Admin User / Password Authentication

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify Custom Target Table Creation	1. Navigate to Tables > Create New. 2. Set Label to 'Employee Test' and Name to 'u_employee_test'. 3. Add columns: Employee ID, Employee Name, Email, Department, Location via Form Layout. 4. Click Save and view form.	Target table u_employee_test is created with all 5 string fields visible in the form layout.	Table created successfully with all required schema columns accessible.	Pass
TC-002	Verify Spreadsheet Ingestion into Import Set Staging Table	1. Go to Application Navigator > System Import Sets > Load Data. 2. Select 'Create table' with Label 'Employee Import'. 3. Choose file Sample Spreadsheet.xlsx and submit.	Staging table u_employee_import is created; state shows 'Complete' and progress indicates 15 records processed with 0 errors.	All 15 employee records loaded into staging table without failure.	Pass
TC-003	Verify Transform Map Creation and Field Auto-Mapping	1. Click 'Create transform map'. 2. Name it 'Sample Spreadsheet Import'. 3. Set Target Table to 'Employee Test (u_employee_test)'. 4. Click 'Auto Map Matching Fields' and Save.	Source staging fields align 1:1 with corresponding target fields.	All matching columns (ID, Name, Email, Department, Location) mapped accurately.	Pass
TC-004	Verify Initial Batch Transformation to Target Table	1. Open Transform Map and click 'Transform' link. 2. Confirm import set execution and observe status. 3. Navigate to u_employee_test list view.	State displays 'Complete' with 15 inserts and 0 errors; all records populate u_employee_test.	15 employee records populated into the Target Table successfully.	Pass
TC-005	Verify Coalesce Field Functionality for Deduplication	1. In Field Maps, set Employee ID Coalesce value to 'true' and Save. 2. Prepare an updated spreadsheet with 2 existing IDs modified and 2 new IDs added. 3. Load data and run Transform Map.	Existing records are updated; new records are inserted; duplicate entries are prevented.	Transform History confirms 2 inserts and 2 updates, maintaining data integrity.	Pass
TC-006	Verify Re-import of Identical Records (Ignore Functionality)	1. Re-upload the exact same spreadsheet without changes. 2. Execute Transform Map and open Transform History.	System identifies duplicate entries and flags them as ignored without modifying target data.	Transform History confirms 0 inserts, 0 updates, and 4 ignored records.	Pass
TC-007	Verify Visual Report Generation (Department Pie Chart)	1. Navigate to Reports > Create New. 2. Set Source Type to 'Table' and select 'Employee Test'. 3. Select Type 'Pie chart', Group by 'Department', Aggregation 'Count'. 4. Click Run and Save.	Report renders an interactive pie chart showing correct distribution of employees across departments.	Pie chart renders accurately with correct department distribution values.	Pass
TC-008	Verify Employee Dashboard Assembly and Visibility	1. Navigate to Self-Service > Dashboards and create a new dashboard. 2. Add the created Department Pie Chart report. 3. Add Employee Test List view and Location Breakdown widgets.	Dashboard consolidates all visual charts and lists onto a single view.	Dashboard displays all report widgets and data rows seamlessly.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Missing columns in default target list view after transformation	1. Execute Transform Map. 2. Open u_employee_test list view. 3. Observe that only default sys columns are visible.	Low	Closed	Resolved by configuring 'Personalize List Columns' to bring Employee ID, Name, Email, Dept, and Location into the list view.
BG-002	Duplicate records inserted when updating existing employee rows	1. Upload updated spreadsheet. 2. Run Transform without setting Coalesce. 3. Check target table row count.	High	Closed	Resolved by setting the Employee ID field map to Coalesce = true, ensuring correct record matching.

Signature: Swasthika

Notes

- All positive data ingestion paths and duplicate prevention constraints were validated.
- The coalesce functionality on unique identifiers ensures consistent database integrity during repeated batch uploads.
- Final dashboard layouts and report aggregations are approved for project submission and demonstration.
